

Traffic and weather information is public information. It is invaluable to a traveler by auto or RV. Only with satellite radio can you receive this information on a continuous basis. Many times you are not in range of any radio station or cannot find a station with the appropriate information. Local radio only broadcasts this information periodically and not frequently. Continuous updates are invaluable and can help a traveler avoid problems or make it possible to reroute a trip based on this information if on a timely basis. It would be ridiculous to try to prevent XM radio from broadcasting this information - and - how does it harm local radio for XM to broadcast it? I see no loss of commercial revenue involved. It seems more like an effort to restrict a competitor which seems childish!!
